

### 3 Tier Software Application

First Step: Draw out your output and visualize it on paper  
Mockups or Balsamiq can visualize your frontend as well

`<html>` = public static void main (String [] args) {}

`<head>` = renders the page

`<meta charset = "utf-8">` = English language common char

`<title>` (insert title here) `</title>`

`</head>` = ends the head tag

`<body>` = below the title

`<h1>` 1st headline on your page `</h1>` to end the headline

`<h2>` = 2nd headline

`<h3>` = 3rd headline

`<p>` = under a body, basically a paragraph

`<br>` = line break, moves to next line underneath

`<em>` = emphasis / italicize around the word

`<strong>` = bolds a text around the word

LISTS:

`<ul>` = unordered lists

`<li>` = list item

`<ol>` = ordered lists
